
Aircapture AB announces Industry Leading Wlan forensics tool

Aircapture's New Wlan forensics product, Aircapture Wlan 14 speeds up and secures process of capturing wireless data. The product will for the first time officially be demonstrated at the Sweden ICT show 19-21 of September 2006.

STOCKHOLM, Sweden., Aug 02, 2006 / -- With the goal of helping security agencies all over the world, Aircapture AB announce its newly developed Aircapture Wlan 14 tool, designed specifically to help officers in the field to automate wireless forensics.

"Aircapture Wlan 14 will make a substantial difference in our customer's ability to rapidly analyze wireless data in the field," said Fredrik Robin, CEO & President Aircapture AB."

Aircapture provides customers with a tool specifically tailored to Wlan forensics. This innovative product, integrating an unprecedented range of the functionality needed for securing Wlan data, allows officers to capture all data on 14 channels with one aggregate antenna without dropping any packets. The development is focused on ease of use so that officer in field does not need to be the typical hacker type. Data can be analyzed later at headquarters with inhouse analyzers.

About Aircapture AB

Aircapture AB develops and manufactures professional tools for wireless forensics that enable security agencies to capture wireless data quickly, reliably, and cost-effectively.
